

## Register tables

# RYMASKON<sup>®</sup> 1000 Interface

Interface for controlling temperature, fans, light and sun protection (2 zones)

Room control unit with colour TFT display and capacitive keys (touch keys), with Modbus connection or (Wireless)

## Information register

### FUNCTION CODE 03 - READ HOLDING REGISTERS

Default Holding Address	Parameter description	Register Name	Access	Value	Range
<b>Device information</b>					
2000	Device Type	Device_Type_2000	r	0...4	0..2 = internally assigned 3 = RYMASKON 130x interface, no control outputs 4 = RYMASKON 140x interface, no control outputs

2025	Internal Error  bit 0= external temperature sensor error (NTC10K) bit 1= I2C communication error	InternalError_2025_bitField  InternalError_TempS2Ext_2025_bit0 InternalError_I2CCommun_2025_bit1	r	0...1	0 = no error (default) 1 = error

## Data register

Data register parameters are stored in the volatile memory (RAM). The values are reset to their default after the unit is restarted. Some parameters can have values saved in the configuration register for restore after the unit is restarted (e.g. setpoint temperature)

FUNCTION CODE 03 - READ HOLDING REGISTERS

FUNCTION CODE 06 - WRITE SINGLE HOLDING REGISTER

FUNCTION CODE 16 - WRITE MULTIPLE HOLDING REGISTERS

Default Holding Address	Parameter description	Register Name	Access	Value	Range	Mapping	Default Input-Register	Default Coil-Register
<b>Sensor data</b>								
100	Temp Sensor 1 int. value	TempS1Int_Value_100	r	-200...1220	-20.0 to 122.0 °C/°F	Input		1

2023	Date Year		r/w	23...99	default 23			

## Data register

Parameters of the configuration register are stored in the non-volatile memory (EEPROM). These parameters may only be changed while the device is being configured and not during operation. These values are retained after the unit is restarted.

**FUNCTION CODE 03 - READ HOLDING REGISTERS**

**FUNCTION CODE 06 - WRITE SINGLE HOLDING REGISTER**

**FUNCTION CODE 16 - WRITE MULTIPLE HOLDING REGISTERS**

Default Holding Address	Parameter description	Register Name	Access	Value	Range
<b>General configuration</b>					
2008	PIN for the display menu (with 0000, no PIN is necessary)	PIN_2008	r/W	0000...9999	0000...9999 (default 1111)
2009	Language	Language_2009	r/w	0...5	0 = German 1 = English (default) 2 = Spanish 3 = French 4 = Italian 5 = Russian
2010	Temp Unit When switching to °F, please note/check/change the following addresses: 2314, 2315, 2914, 2915, 3014, 3015, 3600, 3603, 3604	Temp_Unit_2010	r/w	0...1	0 = °F 1 = °C (default)

## Diagnostics

### FUNCTION CODE 08 - Diagnostics

Sub Function Code	Parameter	Data Type	Response
00	Return Query Data (Loopback)		Echo data
01	Restart Communications Option (Reset Listen Only Mode)		Echo message
04	Force Listen Only Mode		No response
10	Clear Counters and Diagnostic Register		Echo message
11	Return Bus Message Count	Unsigned 16 bit	All valid bus messages
12	Return Bus Communication Error Count (Parity, CRC, frame error, etc.)	Unsigned 16 bit	Faulty bus messages
13	Return Bus Exception Error Count	Unsigned 16 bit	Error counter
14	Return Slave Message Count	Unsigned 32 bit	Slave messages
15	Return Slave No Response Count	Unsigned 32 bit	Broadcast messages (address 0)

## Report Slave ID

### FUNCTION CODE 17 - Report Slave ID

Byte no.	Parameter	Data Type	Response
00	Byte Count	Unsigned 8 bit	6
01	Slave ID (Device Type)	Unsigned 8 bit	4 = On-wall Interface 5 = In-wall Interface 6 = Controller 3AO 7 = Controller 2AO+2DO 8 = Controller 230V 1AO+2DO 9 = Controller 230V 5DO
02	Slave ID (Device Class)	Unsigned 8 bit	110 = RYMASKON
03	Run Indicator Status	Unsigned 8 bit	255 = RUN, 0 = STOP
04	FW version number (release)	Unsigned 8 bit	1...9
05	FW version number (version)	Unsigned 8 bit	1...99
06	FW version number (Index)	Unsigned 8 bit	1...9
